SEE WHAT YOU'VE BEEN MISSING

CURVED  
SLIDING DOORS

- Up to a 180 degree view from inside the building depending on curve
- Available high-tech nano coating to keep glass looking new for longer and reduce maintenance even further
- Adds that “wow factor” to your project
- Lets in more natural light
- Amazing energy savings through employing a thermally broken frame with dual pane, Low E glass
- Can be curved to match the radius of your project in most cases
- Clear view with no interfering cross pieces
- Multitude of available colors
- Low maintenance
- Holds up in marine environments where other materials fall down
- Very competitive prices
- Green friendly product

Fast, friendly and helpful customer service

# overview

At Clearviews we believe that you'll be drawn to our products due to their design, quality and very reasonable prices. However we also believe you'll return because of our fast, friendly and helpful customer service.

Clearviews curved sliding doors are our premium product. They add elegance and beauty and that "wow factor" to any property. This product also maximizes the amount of natural light let into the room.

We stay on the cutting edge of technology, like our high-tech nano coating to keep glass looking new longer and reduce maintenance.

With up to 6 door configurations you can make an awe inspiring impact to your property whilst opening up your view

## economy

We have taken a product that normally could only be afforded by the luxury house market and made it affordable to a broader spectrum of people. We have done this through new breakthroughs in technology and constantly reviewing and updating our manufacturing line.

## quality

The moment you lay your hands on our sliding doors system you can feel right away that only the highest quality materials and advanced engineering were employed. From the peace of mind of our robust multi-point locking system and door hardware, to the smooth glide of the doors over our tough, high-grade stainless steel wheel track. You'll know right away that the only corners cut here were on the price.

## versatility

Our system can be curved to match to your project down to very tight radii. We also provide an abundance of colors to help you blend our system in with your existing structure.

## energy efficiency

At Clearviews we care about the environment and saving energy and resources.

Our doors come standard with the most advanced energy saving features without any extra costs to you. For instance we use a thermally broken frame which acts to reduce the transfer of hot or cold through the frame itself.

Our doors come standard in dual pane, Low E glass that also helps to reduce the transfer (loss or gain) of temperature. This combination makes for a very energy efficient system that will save you energy and thus money.

Possible Visioglide Configurations:		Plan	3D view
<b>W2</b>	Two doors sliding		
<b>W2F</b>	Two doors one sliding, one fixed		
<b>W3F</b>	Three doors two sliding, one fixed		
<b>W4</b>	Four doors sliding on two tracks		
<b>W4F</b>	Four doors, two sliding, two fixed		
<b>W6F</b>	Six doors, three tracks, four sliding		

Note: The above diagram is to show the possible amount and configuration of our doors. We can curve our doors to match the radii of most projects.

- Maximum height: 8' 6" (102")
- Maximum panel size: 5' 8" (68")
- Minimum curved radius 3' 6" (42")
- Twin polyamide thermally broken 6063 T5 extruded aluminum profiles
- Stainless steel wheel track
- Frames use internal glazing beads
- Finish 60-100 micron polyester powder coating
- Standard RAL colors available
- Glazing 28mm tempered Low-E double pane
- Gaskets are EPDM (ethylene-propylene rubber)

Curved Sliding Door detail

## tired of being "boxed in"?

Nobody likes living in a box, so think outside the box and go curved!

### Did you know?

Also made of aluminum:

Many of the satellites circling the Earth are protected from space debris by layers of anodized aluminum.

Due to its amazing corrosion resistant properties many modern boat masts are made of aluminum.

### eco-friendly

A large percentage of the aluminum used to produce these products is recycled aluminum. Aluminum is 100% recyclable.

As it is the 3rd most plentiful element in the Earth's crust (third only to oxygen and silicon), it is a completely sustainable resource.

These products don't need repainting like wooden products. This helps keep harmful VOCs out of the environment.

With this product allowing more natural light into your rooms, it can help decrease the need for as much artificial lighting and thus aid the environment and save you money.
